BetterTec

Serialization Solution 🔡

PRODUCT MARKING AND AGGREGATION TO DIFFERENT PACKAGING UNITS

In the age of global trade, a lot of companies face product piracy and counterfeits. The need for clear identification is growing in all industries and the marking of products (serialization) becomes more important. The BetterTec Services GmbH offers an effective solution to label every item with a unique serial number and therefore creates the prerequisite for a complete traceability throughout the entire supply chain.

With our serialization solution, items can be marked (serialized), linked to other packaging units and traced back to their origin – even in a multistage distribution chain. The module BetterID serves to generate and print serial numbers. These serial numbers can then be scanned within the BetterPacksystem, which also bundles all scanned items under only one code, e.g. on the shipper label. Thanks to this aggregation, it can easily be determined which serial numbers are located in which carton or pallet.

Serialization with BetterID

The serial numbers can be generated through the web application BetterID. Every single item becomes unique through the marking with an individual serial number. The generated serial numbers will be supplied in the form of an export file and can be passed on to a printing system to imprint the folding boxes. Alternatively, the serial numbers can be printed on labels, which we will design according to your special needs.

Unique Item
by marking with a unique and safe
serial number

Fast Implementation by putting the preconfigured system into operation "plug-and-play"

Efficient Scanning by simultaneously collecting various 1D- or 2D-codes

Time Saving in the Supply Chain by linking packaging units (Aggregation of product codes to shipping cartons / pallets)

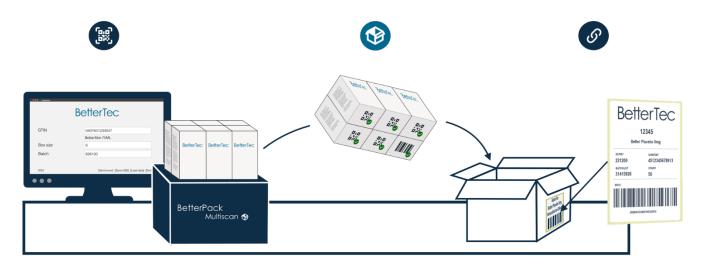

BetterTec

Serialization Solution 🔡

Aggregation with BetterPack Multiscan

The module BetterPack serves for an efficient aggregation of product codes on item level to other packaging units, e.g. shipper cartons and pallets, as well as for the generation of labels for the respective packaging units. To collect the serialized product codes, the scan system BetterPack Multiscan is used. Unlike conventional methods, the product codes will be collected by placing them on the scanning device. This allows a simultaneous collecting of various (serialized) 1D- or 2D-codes (e.g. data matrix- or QR-codes) via the scanning device.

When the shipper is full, it will be labeled with an appropriate shipper label (GS1-compliant layout with SSCC code). All items included in the shipper are now linked via the code of the shipper label. This aggregation brings advantages for the whole supply chain. There is no need to scan the serialized items in every stage of the delivery process. Thanks to the aggregation the supplier knows already which serial numbers are included in the delivery after scanning the shippers and pallets and without having to open them.

Capturing the items

in the BetterPack-Application by placing various items simultaneously on the scanning device

Packaging

the scanned items in the respective shipper carton

Aggregation

of the scanned items to a shipper carton / pallet and generation of labels for every packaging unit

ABOUT US

The BetterTec Services GmbH is headquartered in Cologne and develops solutions for the serialization and personalization of products and documents. With the marking of items, cartons and pallets BetterTec servers its customers in the fields of distribution control, identification of counterfeits, efficient and less error-prone commissioning as well as loyalty and customer relationship programs.

As a small company the BetterTec Services GmbH offers customized solutions and an all-round-support to their customers. Every customer is consulted individually and is looked after by a personal contact person.
